Name:	ACCELERATOR FOR EPOXY	Category:	additive
Definition:	Additive for 2K epoxy systems		
Code:	03.023		

NATURE OF THE PRODUCT

Solution of accelerators for epoxy systems.

GENERAL USES

Indicated to reduce hardening times, helping to accelerate the achievement of maximum mechanical performance and film hardness.

The use of this additive significantly reduces the pot life of the hardened product.

PREPARATION OF THE PRODUCT

Use a percentage that varies from 0.5 to 1% by weight, calculated on the final weight of the enamel ready to use.

Add the additive to component A of the system to be accelerated, mix carefully dispersing evenly, and then proceed with the addition of tinters and hardener.

Carefully mix until an even colour and consistency are obtained.

POSSIBLE PROBLEMS DUE TO OVERDOSE

An excess dosage of the additive, in glossy systems, can lead to surface defects of the film; generically there can be anomalies in the consistency and surface stickiness.

STORAGE STABILITY:

One year, stored in closed packs, in a cool, dry place, away from any sources of heat.
